Hello Technology and Software World!

We are delighted to add a new innovation to our solutions for digitalizing and managing your business processes with the Bimser Synergy Low-Code Platform.

IntelliSense is now available in server-side development on the Bimser Synergy Low-Code Platform!

💡 What's Changing?

Developers can now leverage IntelliSense while writing server-side C# code within the IDE. This feature will make the development process more efficient by offering code completion, debugging, and quick suggestions.

🔑 Key Features:

Code Completion:

While writing code, the IDE will automatically provide appropriate variable, function, and object suggestions.

Debugging:

Identifying and fixing errors will be much easier.

Code Navigation:

You can navigate your code more easily and quickly, saving time even on large projects.

Who is it For?

This innovation will be particularly beneficial for software teams developing intensive business processes and integrations on Bimser Synergy.

It will accelerate the development process and reduce error rates for both beginners and experienced developers.

Your Feedback is Important!

After trying out this new feature, don't forget to share your feedback with us. We value your opinions to continuously improve our product and provide better service to you.

Let's manage your business processes smarter and faster!
