

Synergy

AI LOW CODE PLATFORM

Low-code agility, enterprise control, and AI-powered operations – all on a single platform.

Bimser Synergy is an integrated digital platform that manages business processes, documents, and enterprise systems within a unified context. With its low-code infrastructure and AI-powered engine, it enables organizations to achieve end-to-end operational control.

Advanced Process Orchestration

AI-Powered Capabilities

Document Management

Dashboards & Reporting

bimser synergy

Key Features

Synergy VibeCode Process Development with Natural Language

- End-to-end process automation with Agentic AI
- Form design powered by vibe coding
- Modern UI development with 130+ ready-to-use components

LowCode Platform

- Rapid deployment with a container-based architecture
- Scalable and flexible system architecture
- Complex process modeling with advanced process orchestration

Preserve Enterprise Knowledge

- End-to-end document lifecycle management
- Enterprise knowledge search powered by RAG
- Versioning, archiving, and automatic indexing
- Role-based access and secure sharing

Real-Time Visibility for Decision Makers

- Role-based, dynamic dashboards
- Real-time performance monitoring and analytics
- Centralized data visibility and reporting

Enterprise AI

- AI-powered code analysis, multilingual support, and developer assistant
- NLP-powered document conversations, summarization, and content generation
- Fast data querying using natural language

Deployment Flexibility

Public Cloud
Instant Scalability

Private Cloud
Secure Environment

On-Premise
Full Control

Hybrid
Maximum Flexibility

Strategic Benefits

- ⬆ Faster Process Execution
- ⬆ Operational Cost Optimization
- ⬆ Marketplace Expandability

- ⬆ Secure Data Management
- ⬆ Centralized and Traceable Architecture
- ⬆ AI-Powered Business Processes

- ⬆ Growth-Ready Architecture
- ⬆ Global Scalability
- ⬆ Operational Agility

150 Customers

2000+ Projects

50000+ Users

30+ Countries

From Natural Language to Digital Processes with **Synergy VibeCode**

Faster, More Flexible, More Accessible

Synergy VibeCode transforms process development by enabling users to design the digital workflows they need using only natural language prompts. With its vibe coding capabilities, forms, process flows, and the underlying code structure are automatically generated with AI assistance.

Building on the traditional low-code approach of developing applications with pre-built components, Synergy VibeCode introduces a smarter and more automated development experience. **Agentic AI**, it **accelerates end-to-end process automation**, making process development more accessible, agile, and efficient.

Key Features

GPT Prompt Integration with the Data Connector

Combines form data with custom prompts to generate AI-powered outputs instantly, delivering speed, flexibility, and personalization.

AI Multilingual Support

Automatically translates forms and workflows into multiple languages with a single click. Minimizes localization costs for global operations.

AI Review Assistant

Analyzes custom code to detect errors and performance issues before deployment. Improves development quality and identifies risks early.

AI Developer Assistant

Provides instant answers to developer questions and offers ready-to-use code examples. Shortens development time and reduces the learning curve.

AI Document Assistant

Engages in conversations with documents, generates summaries, and creates content. Dramatically reduces the time required to access information.

AI Help Assistant

Provides real-time guidance on platform usage. Reduces support requests while increasing user independence.

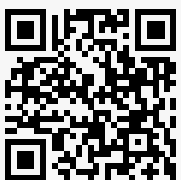

AI Query Assistant

Generates queries using natural language. With simple prompts such as "List expenses over 5,000 TL," AI automatically creates the required queries.

What Do You Gain with Synergy VibeCode?

- Accelerated Development
- Global Readiness (Multilingual Support)
- Faster, Smarter Decision-Making
- Intelligent Data & Content Management
- Flexible Deployment: Public Cloud, Private Cloud, or On-Premises
